

## GIE launched its new visualisation tools and interactive maps!

GIE unveiled its visualisation tools and interactive maps during a transparency roundtable on 8<sup>th</sup> November 2022. Hundreds of users from around the world registered to hear about those new innovative tools. User-friendly and customisable, they aggregate the “must-have data” on European LNG terminals and underground gas storages. All decision-makers will now be able to follow daily EU gas market fluctuations in one glance and with tailored data visualisation.

### Increased coverage:

- 100% coverage of EU LNG infrastructure: <https://alsi.gie.eu/data-visualisation/maps>
- More than 98,5% for underground gas storage: <https://agsi.gie.eu/data-visualisation/maps>

No worries, all the excellent information from the well-known GIE transparency platform ALSI and AGSI remain there (data from GIE LNG & Storage Databases, the operational and transparency data sent by gas infrastructure operators: Operators' operational & transparency data). This time, it will be dynamic and customisable to adapt the data visualisation to your exact need.

*"Being exhaustive, reliable and updated daily, GIE transparency platforms are well-known across data analysts and decision-makers from various sectors. It is just handy to find all information centralised in the same place. With these new interactive maps, you, at once glance, look at EU27 and have all the data from LNG terminals in the same place. And the same for*

storage." **Ákos KRISTON**, Chairman of the GIE Transparency Working Group and CEO of Hungarian Gas Storage.

### Tools to monitor the security of supply in Europe

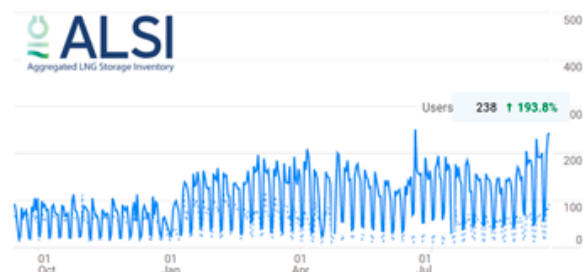

Those tools are unique. All the decision-makers who can gain or be impacted by the gas market's fluctuations know those tools. Underground Storage, LNG terminals, and all the figures you need are here. For sure, you might have read their name somewhere, as a source from data in a newspaper, on Twitter, or as a source on a conference's slide. GIE is everywhere: they are the only platform to provide such an exhaustive and updated overview. Now, the energy sector is under the spotlight. But GIE didn't wait for this perma-crisis environment to develop before taking action. For more than 15 years, GIE has been innovating to collect, uniformise and centralise the available data from the gas market operators of Europe.

### Skyrocketing utilisation rates

Always closely followed by economists, journalists and policymakers, business leaders or academia, gas market evolutions have never been so much under the spotlight. They have entered our homes and have been the stars of EU news for more than a year.

- **AGSI** traffic is at **10 times (+1071,1%)** & still going up compared to one year ago

- **ALSI** traffic has **doubled (+193,8%)** & still going up compared to one year ago

"The transparency features and visualised items of AGSI and ALSI are extremely useful and we encourage everyone to use this tool, which contains up-to-date information about the European storage and LNG market"

### About the event

Almost 300 experts from all around the world registered to follow and the materials from the second edition of the GIE Transparency Round table.

Launched by Ákos KRISTON, GIE Board Member and CEO of Hungarian Gas Storage, this one-hour discussion was the occasion for the different experts to present the different dimensions of the tools. David DEFOUR, Technology Officer, provided the audience with an overview of the daily data publication for storage and LNG. Subsequently, Mathilde BLANCHARD, GIE Policy Advisor, shed light on how to use GIE transparency data to analyse the gas storage market. *In addition*, ALSI and LNG data usage tips and the interactive maps were presented by Bogdan SIMION, GIE Data Analytics Advisor.

Shaped under an interactive format, users were invited to get in conversation with experts, addressing their questions and grabbing the opportunity to congratulate the team for its excellent work.

## Promote your services to the right people

The traffic on GIE transparency platforms has exploded, and it makes sense as gas market evolution data is an essential part of the decision-making for various sectors.

### **Showcase your project to the right people**

Are you aiming to spread the word around the energy and financial world?

Well, we have an opportunity for you.

Benefit from our popularity across the energy experts to increase your visibility.

### **Who is visiting GIE transparency platforms?**

Policymakers, regulators, data analysts, financial sector, academia, industry representatives.

Our users are the decision-makers shaping our world.

They are coming from the European Union. But that's not all.

We see visitors from America and other regions of the world.

### **Let's talk!**

## Who is GIE

Gas Infrastructure Europe (GIE) is the association representing the interests of the European gas infrastructure operators. GIE members operate Europe's renewable and low-carbon gas transmission, storage and LNG regasification terminals. It gathers around 70 industry entities from 27 countries that embody multiple decarbonisation pathways of the EU regions. GIE's vision is that by 2050, the gas infrastructure will be the backbone of the new innovative energy system, allowing European citizens and industries to benefit from a secure, efficient, and sustainable energy supply.
