

Keeping an eye on the security of supply in Europe: GIE AGSI+ Transparency Platform extends its coverage to 97% in EU27

Brussels, 7 March 2022

AGSI+ welcomes 2 new German Storage System Operators (SSOs):

[Gas Infrastructure Europe](#) (GIE) is pleased to welcome **EDF Gas Deutschland GmbH** and **EnBW Etzel Speicher GmbH** as data providers on its **AGSI+ Transparency Platform**. The two companies jointly operate a storage facility in Etzel, Germany as *Friedeburger Speicherbetriebsgesellschaft mbH Crystal*. This additional data on the platform will extend its coverage to 97% of EU27 working gas volume.

Dr Axel Wietfeld, President of [Gas Storage Europe](#) (GSE), the European SSO association and hence one column of GIE, commented: “GSE members have decided to jointly develop this common tool, including commercially relevant information for storage users. The aim is to centralise the operational information of underground gas storages, making it accessible to stakeholders and interested parties. This voluntary initiative is particularly relevant in the context of the European Commission’s considerations to rely on the transparency of storage filling rates to ensure that assessment and proper actions are taken if the levels are not sufficient.”

A tool to monitor security of supply in Europe:

Transparency tools are crucial for experts to monitor the energy market evolution. It supports decision-makers and analysts in their work by bringing figures on the reality on the ground. GIE [AGSI+](#) and [ALSI](#) Transparency Platforms are proving to be reliable and well-recognised information sources offering a daily reporting by operators of storage and LNG facilities. Over the last 180 days, for instance, the website traffic on GIE Transparency Platforms has increased by 265%.

Close up on GIE’s transparency activities:

For more than 15 years, GIE has worked and innovated to offer the most reliable, efficient and user-friendly transparency instruments. Further platform upgrades providing additional data visualization and export options are to be expected. GIE transparency services are further completed by the implementation of standardised transparency templates by [storage system](#) and [LNG system operators](#), yearly map publications (LNG, storage, biogas, etc.) and their associated [databases](#), and specific database content such as the GIE Services Inventory and LNG List of Services.

Who is GIE

Gas Infrastructure Europe (GIE) is the association representing the interests of European gas infrastructure operators. GIE members are active in transmission, storage and regasification via LNG terminals of renewable and low-carbon gases, including natural gas and hydrogen. Gathering 67 industry entities from 27 European countries, GIE perfectly embodies the multiple transitional decarbonisation pathways of the EU regions. The association's vision is that by 2050, the gas infrastructure will be the backbone of the new innovative energy system, allowing European citizens and industries to benefit from a secure, efficient and sustainable energy supply.
