

Press Release

System Development Map 2020/2021 published by ENTSOG and GIE

(Brussels, 12 January 2022, PR0267-22) **The 10th edition of the System Development map, illustrating existing and planned gas infrastructure and gas capacities in 2020-2021, was developed by the European Network of Transmission System Operators for Gas (ENTSOG) and Gas Infrastructure Europe (GIE).**

This map is updated on a yearly basis and is a widely used reference for European and non-European stakeholders alike. It provides useful, accurate and up-to-date information about the recent gas demand in European countries and the capacities in the European gas infrastructure. Historical demand and supply data are also presented.

Piotr Kuś, ENTSOG General Director, commented, *“The System Development Map, which is published jointly by ENTSOG and GIE, provides an easy reference overview of existing gas infrastructure, the outlook for its development, and the supply and demand situation at both the European and national level. As such, it contributes to enhanced transparency, allowing for efficient analysis by market stakeholders and complements the information provided in the ENTSOG Seasonal Supply Reports.”*

Boyana Achovski, GIE Secretary General, said: *“The data we provide on the EU gas market should be carefully considered: they enable to assess energy challenges and prevent crises. Our tools support policymakers and market actors who can take enlightened decisions and preventive actions. Information is power, nothing new with that, and we want this power to benefit the whole energy transition and its actors. That’s why we work hard on developing transparency tools.”*

ENTSOG and GIE are committed to further enhancing the information provided on the map for future editions and welcome feedback from stakeholders.

The pdf map is available for download at the ENTSOG website, [here](#) and GIE website, [here](#).

All maps published by ENTSOG and GIE can be ordered in hardcopy format at <https://maps.entsog.eu> or <https://www.gie.eu/map-order>.

Editorial notes

- > **The European Network of Transmission System Operators for Gas (ENTSOG)** was founded in line with Regulation (EC) 715/2009 and has played a key role in facilitating integration of the European gas markets, ensuring technical interoperability and providing security of supply by gas infrastructure planning. Looking forward, ENTSOG is contributing to the net-zero decarbonisation by 2050, in particular, by the integration of renewable and low carbon gases via future-proof gas transmission pipelines, in line with the EU energy and climate goals. More information on ENTSOG can be found on our website – or contact info@entsog.eu.
- > **[Gas Infrastructure Europe \(GIE\)](#)** is the association representing the interests of European gas infrastructure operators active in gas transmission, gas storage and Liquefied Natural Gas (LNG) regasification. GIE is a trusted partner of European institutions, regulatory bodies and industry stakeholders. It is based in Brussels, the heart of European policymaking. GIE currently represents 70 member companies from 26 countries. GIE's vision is that by 2050, the gas infrastructure will be the backbone of the new innovative energy system, allowing European citizens to benefit from a secure, efficient and sustainable energy supply.
