SECURITY OF SUPPLY

Charlotte Roule

GSE

Gas storage capacity and filling are both essential to energy security

Europe must withstand prolonged cold spells, supply disruptions and peak demand.

01 Enough storage capacity

Size storage volumes, injection and withdrawal rates for security of supply.

Regulation must recognise insurance value and support economic viability.

02 Enough gas in storage

Define how much gas is needed, when it must be available and how needs evolve.

Assess supply risks and the need for storage to set appropriate filling levels.

GSE study on gas storage needs

Artelys (modelling) and Compass Lexecon (regulation)
