

The banner features the ELSA logo at the top left, with the text 'European LNG & Storage App' below it. The main headline reads 'Energy data, in your hands.' followed by 'European LNG & gas storage data.' and 'Available on iOS & Android'. Two QR codes are provided for app download, with 'Download on the App Store' and 'GET IT ON Google Play' buttons below them. The GIE logo and tagline 'Infrastructure for a net-zero Europe' are at the bottom center. On the right, a smartphone displays the app's interface, showing a map of Europe with storage locations, a status bar at the top, and a detailed view of a specific storage facility (UMM) with its coordinates and operator information.

GIE launches ELSA, bringing European gas storage and LNG data to your phone

The new European LNG and Storage App (ELSA) gives users easy access to operational data and urgent market messages, wherever they are.

Brussels, 27 October 2026 –

Finding and following gas infrastructure data should be straightforward. With the launch of ELSA, the European LNG and Storage App, Gas Infrastructure Europe (GIE) is making key information on gas storage and liquefied natural gas (LNG) easier to access from a mobile phone.

Available on Android and iPhone, ELSA brings together daily operational data on gas storage and LNG infrastructure across Europe. Users can check storage levels, injection and withdrawal data, LNG regasified gas and urgent market messages, with information available by country as well as in a consolidated European overview.

The app gives market participants and other interested users another way to keep up with developments across Europe's gas infrastructure, without needing to be at their desks to consult the data.

"I am pleased that this year's Annual Conference also marked the launch of ELSA, GIE's new Transparency App. We want to make transparency information easier to find, easier to

understand and more convenient to access for users across Europe,” said Georg Dorfleutner, GIE Board member responsible for Transparency

“REMIT II is helping strengthen market integrity, but its success will also depend on how efficiently transparency information is delivered and accessed. This is where industry can complement the regulatory framework.

At GIE, we want transparency information to be useful in practice, not simply available to meet a regulatory requirement. This means making it easier for people to find and use the data they need. ELSA is one way we are working towards that goal. Regulators set the framework, but industry also has a role to play in making transparency work for the market.”

With ELSA, users can check gas storage, LNG data and Urgent Market Messages from their phones, whether they want to follow developments in a particular country or get a broader picture of the European market. The app brings these figures together in one place, making it easier to keep track of the information that matters to them.

ELSA is available now on Android and iPhone.
