

GTE comments on EASEE-gas presentation on Interoperability

Patrick G. Wailliez – GTE Vice-President

Madrid Forum VIII – 8-9 July 2004

GTE comments on EASEE-gas presentation on Interoperability

- **GTE-members are actively involved and playing a key-role in the EASEE-gas process**
- **GTE is fully in line with the EASEE-gas proposals**

GTE recommendations (1)

- **In order to create a fully operational and integrated EU-market, GTE recommends:**
 - ▶ **measures based on level playing field, avoiding:**
 - *to export a national problem abroad*
 - *to distort competition*
 - ▶ **pro-activity of Authorities in order to:**
 - *anticipate & prepare for future changes*
 - *timely implement the suitable legal framework (critical path!)*

GTE recommendations (2)

- ▶ **a realistically fast implementation of the necessary measures with:**
 - **For each stakeholder: Milestones**
 - **For each Gas Quality parameter: Specific implementation timeframe**
 - *Allowing quick wins where feasible*
 - *Respecting interdependencies between linked parameters (e.g. Wobbe/ Oxygen)*
 - **Any specific constraint on Calorific Value should be removed**
